SEPTEMBER 30, 2024

Management Discussion of Fund Performance

This management discussion of fund performance represents the portfolio management team's view of the significant factors and developments affecting the fund's performance and outlook.

Investment Objective and Strategies

As described in the Simplified Prospectus, the investment objective of AGF Total Return Bond Class (the "Fund") is to provide interest income and capital appreciation by investing in debt securities of governments and other issuers around the world. To achieve this objective, the Fund currently invests in units of AGF Total Return Bond Fund (the "Underlying Fund") and may also invest directly in securities similar to those held by the Underlying Fund. AGF Investments Inc. ("AGFI"), as portfolio manager employs a top-down fundamental approach to currency management category and country allocation, curve positioning and duration management and a bottom-up approach to security selection. The portfolio manager seeks to maximize the total return of the portfolio by identifying exposures that provide an attractive risk-to-return profile. A top-down investment approach involves looking at the "big picture" in the economy and financial world and then breaking those components down into finer details. Duration is a measure of the sensitivity of the portfolio to changes in interest rates. A bottom-up investment approach focuses attention on a specific company rather than on the industry in which that company operates or on the economy as a whole. The Fund may also invest in below investment grade government and corporate obligations (i.e. a credit rating below BBB from Standard & Poor's or an equivalent rating from another rating agency). During periods of market downturn or for other reasons, a significant portion of the Fund's assets may be held in cash, cash equivalents or fixed income securities.

Risk

The risks of investing in the Fund remain as disclosed in the current prospectus. Any changes to the Fund over the period have not affected the overall level of risk of the Fund.

The Fund continues to be suitable for investors investing for the medium term and who have low tolerance for risk. The suitability of the Fund has not changed from what has been disclosed in the prospectus.

Results of Operations

For the year ended September 30, 2024, the Mutual Fund Shares of the Fund returned 9.0% (net of expenses) while the Bloomberg Global High-Yield Index and the Blended Benchmark returned 18.5% and 15.4%, respectively. The Blended Benchmark is composed of 40% Bloomberg

Emerging Markets USD Aggregate Index (hedged to CAD)/40% Bloomberg Global High-Yield Index (hedged to CAD)/20% Bloomberg Global Aggregate Index. The performance of the other series of the Fund is substantially similar to that of the Mutual Fund Shares, save for differences in expense structure. Refer to "Past Performance" section for performance information of such series.

The Fund holds Series I Units of the Underlying Fund, a fund managed by AGFI. The discussion below references performance figures for Mutual Fund Units of the Underlying Fund. The performance of Series I Units is substantially similar to that of Mutual Fund Units, save for differences in expense structure.

The Fund under-performed the Bloomberg Global High-Yield Index due to the Underlying Fund's exposure to other fixed income categories in addition to high yield, versus the index which is 100% high yield. The Underlying Fund's underweight exposure to high yield corporate bonds was a detracting factor as resilient economic conditions supported higher beta corporate credit overall, causing spreads to narrow considerably over the reporting period. Beta measures the relative volatility of the value of a security compared with that of a market index. The Underlying Fund maintained an elevated exposure to sovereign bonds during the reporting period in expectation of economic growth being challenged going forward.

On the other hand, the Underlying Fund's overweight position to South African local currency bonds contributed to performance as the South African Rand strengthened versus the Canadian dollar over the reporting period. Likewise, the Underlying Fund's out-of-benchmark exposure to Turkish local currency bonds was a positive contributor, as more orthodox monetary policy benefited local debt instruments, and the total returns generated by the Turkish Lira relative to the Canadian dollar. In an effort to diversify away from the inverted Canadian yield curve, the Underlying Fund increased its allocation to select European treasuries with medium term maturities, which exhibited more attractive yield curves and carry opportunities over the period. Carry is the difference between the yield on a longer-maturity bond and the cost of borrowing. A more benign growth environment in Europe was expected to keep the European Central Bank ("ECB") less hawkish than the U.S. Federal Reserve (the "Fed"), which contributed to performance. The ECB cut interest rates twice over the reporting period, ahead of the Fed. Towards the end of June 2024, there was some weakness and increased volatility in Europe post the European Union ("EU") parliamentary elections, as surprise results in France renewed concerns about the country's fiscal deficit. Towards the end of the second calendar quarter of 2024, the Underlying Fund liquidated a majority of its

This annual management report of fund performance contains financial highlights, but does not contain the complete annual financial statements of the investment fund. SEPTEMBER 30, 2024

position in French treasuries prior to the election results on valuation concerns and moved the proceeds to German Inflation-linked bonds and nominal bonds of Germany, Spain and Portugal.

The Underlying Fund maintained an overweight allocation to local Mexico bonds throughout the reporting period, although this position was reduced significantly following the surprise election results in June. This led to an overall weakness in the Mexico Peso which posted negative returns relative to the Canadian dollar over the reporting period.

The Underlying Fund had a significant underweight to the U.S. dollar relative to the Bloomberg Global High-Yield Index, comprised of mostly the U.S. dollar, which contributed to relative performance as the U.S. dollar slightly depreciated against the Canadian dollar over the reporting period. The Underlying Fund's exposure to the U.S. dollar was managed tactically but was reduced significantly by the end of the reporting period. An overweight allocation to the Australian dollar, Pound Sterling and New Zealand dollar also contributed to the Underlying Fund's performance as the currencies appreciated slightly.

The Fund under-performed the Blended Benchmark due to the Underlying Fund's underweight allocation to high yield corporate bonds and overweight allocation to higher quality sovereign bonds, which largely under-performed other fixed income categories over the reporting period on a relative basis. Resilient economic conditions supported corporate credit overall, causing spreads to narrow and benefitting higher beta corporate credit. The Underlying Fund maintained an overweight position in sovereign bonds relative to the Blended Benchmark in expectation of economic growth being challenged going forward. However, growth remained reasonably strong over the reporting period coupled with stickier inflation, resulting in under-performance for sovereign bonds relative to higher beta instruments. The Underlying Fund's duration profile ended the reporting period shorter than that of the benchmark but was tactically managed over the period, as economic data and geopolitical issues impacted the global bond outlook.

Towards the end of June, surprise election results in Europe caused volatility in French government bonds after a rating downgrade stemming from fiscal concerns. The Underlying Fund reduced its exposure to French treasuries prior to the rating downgrade, partially avoiding the market volatility. In June, the Underlying Fund's local exposure to Mexico was trimmed to under 2.0%. The Underlying Fund sold the longest-tenured bonds as the country's long-term growth prospects became unpredictable since the election. Towards the end of June, the Underlying Fund liquidated a majority of its position in French treasuries prior to the election results on valuation concerns, and moved the proceeds to German inflation-linked bonds and nominal bonds of Germany, Spain and Portugal. The Underlying Fund's out-of-benchmark exposure to Turkish local currency bonds was a positive contributor, as more orthodox monetary policy benefited local debt instruments, and the total returns generated by the Turkish Lira relative to the Canadian dollar.

From a currency standpoint, the Underlying Fund's overweight position to the Mexican Peso detracted from performance. On the other hand, the Underlying Fund's underweight position to the U.S. dollar relative to the Blended Benchmark contributed, as the U.S. dollar slightly depreciated against most major currencies over the reporting period. An overweight allocation to the Australian dollar, Pound Sterling and New Zealand dollar also contributed to the Underlying Fund's performance as the currencies appreciated slightly.

The Underlying Fund entered into foreign exchange forward contracts during the period under review. As of September 30, 2024, the Underlying Fund was long Canadian dollar and short Australian dollar, Czech Republic Koruna, Euro, Japanese Yen, Norwegian Krone, Pound Sterling and U.S. dollar in order to hedge its currency exposure.

Certain series of the Fund, as applicable, make monthly distributions of capital at a rate determined by AGFI from time to time. The portfolio manager does not believe that the distributions made by the Fund had a meaningful impact on the Fund's ability to implement its investment strategy or to fulfill its investment objectives.

The Fund had net redemptions of approximately \$21 million for the current period, as compared to net redemptions of approximately \$9 million in the prior period. The portfolio manager does not believe that redemption activity had a meaningful impact on the Fund's performance or the ability to implement its investment strategy.

Total expenses before foreign withholding taxes, commissions and other portfolio transaction costs vary period over period mainly as a result of changes in average Net Asset Values (see Explanatory Note (1) a)) and investor activity, such as number of investor accounts and transactions. Expenses have decreased as compared to the previous period due mainly to a decrease in average Net Asset Values. The decrease in interest expense was due to a one-time tax instalment interest paid in the previous period. The decrease in independent review committee fees was due to variances between the accrued amounts versus the actual expenses incurred in the previous period. All other expenses remained fairly consistent throughout the periods.

Recent Developments

During the reporting period, global bond markets delivered positive returns amid variable economic data, geopolitical conflicts and actions taken by central banks. Inflation rates in major economies remained sticky for most of the reporting period, although they began to ease towards the end of the reporting period, driven by a decline in energy prices. Headline inflation in Canada decelerated for the third straight month, reaching 2.0% in August 2024 and aligning with the Bank of Canada's ("BoC") target for the first time in over three years. The BoC announced three back-to-back interest rate cuts of 0.25% in its June, July and September 2024 meetings, bringing its overnight lending rate down to

AGF Total Return Bond Class

(CLASS OF AGF ALL WORLD TAX ADVANTAGE GROUP LIMITED)

SEPTEMBER 30, 2024

4.25%. The move further indicated that the central bank is in a "cutting phase" in response to easing inflation and a meaningful rise in unemployment.

Consumer price inflation in Canada, recorded at 3.1% in October 2023, declined significantly year-on-year over the reporting period. The reading for August 2024 came in below market expectations of 2.1%. This slowdown was partly driven by a reduction in gasoline prices, resulting from both lower current prices and base-year effects. Additionally, prices for clothing and footwear decreased for the eighth month in a row. At the same time, inflation for shelter costs showed signs of easing. Core inflation also cooled to 1.5% in August 2024 from 2.7% in October 2023, reaching its lowest level since March 2021. Gross domestic product ("GDP") growth over the reporting period has been relatively weak and mostly attributed to population growth. Despite the expanding consumer base, GDP growth numbers are below the BoC's forecasts, suggesting continued weakness in consumer spending and the potential need for further rate cuts ahead.

U.S. treasury yields were volatile over the reporting period but declined towards the end amid increased investors' expectations of rate cuts during the third calendar quarter of 2024. The U.S. 10-year treasury yield decreased from 4.57% to 3.78% over the reporting period, and the 2-year treasury yield fell from 5.03% to 3.66%. The 10-year versus 2-year treasury yield spread tightened over the reporting period and the yield curve became positively sloped entering September 2024, reflecting growing optimism for longer term economic growth. The U.S. Dollar Index weakened over the period despite a broadly resilient economic backdrop, as the market started an early pricing-in of the Fed's eventual rate cut in September.

Global investment grade and high yield bonds saw positive returns over the reporting period amid a declining inflation profile and stronger-than-anticipated growth in select markets. Meanwhile, the Canada 10-year bond yield declined from 4.03% to 2.96% and the yield on the 2-year bond dropped from 4.87% to 2.91% over the reporting period, also returning to a positive slope. Credit spreads tightened considerably during the reporting period and most credit categories out-performed government bonds on higher yields versus their safer counterparts.

The ECB reduced the deposit facility rate by 0.25% to 3.50% in its September 2024 meeting to ease monetary policy restrictions. The ECB also lowered interest rates on the main refinancing operations and the marginal lending facility to 3.65% and 3.90% respectively, effective September 18. Previously, the central bank cut interest rates by 0.25% in June 2024 to spur growth in the EU. Inflation in the Eurozone eased to 2.2% in August 2024, the lowest since July 2021. This resulted from falling prices for energy and slowing inflation for non-energy industrial goods. Core inflation slowed to 2.8% in August 2024 from 4.2% in October 2023. Among the largest economies in the bloc, inflation declined in Germany, France, Italy and Spain during the reporting period. Over the period, even though the Eurozone's manufacturing

purchasing managers' index ("PMI") rose, factory activity declined in September amid the market downturn in France and Germany, reaching its lowest level in the first nine months of 2024. The PMI measures the economic health of the manufacturing sector and is compiled based on new orders, inventory levels, production, supplier deliveries and employment environment. This decline marked over two years of monthly contractions in factory activity in the bloc. The expansion in the services PMI slowed in September, but on the whole, the sector activity continued to expand for the eighth consecutive month.

China's economy experienced a quarter-on-quarter GDP growth of 0.7% in the second calendar quarter of 2024. While this marks the eighth consecutive quarter of growth, it also represents the slowest pace since the second calendar quarter of 2023, influenced by several domestic challenges. The trouble in the country's property sector continued as new home prices declined by 5.3% year-on-year in August 2024. This was the 14th straight month of decrease and the steepest pace since May 2015, despite the government's extensive measures to reverse a downturn in the property sector, such as trimming mortgage rates and reducing home buying costs. New home sales also fell by 26.8% in August 2024 year-on-year compared to a 27.5% decrease in October 2023. This reading reached a record low of a 60.0% fall in February 2024. China's unemployment rate increased over the reporting period, while business and consumer confidence shrank. However, manufacturing and services activity ticked higher, and the sectors saw an expansion over the reporting period.

The People's Bank of China ("PBoC") remained committed to its supportive monetary policy stance. In September 2024, the PBoC introduced a series of measures to boost the economy amid concerns that the official growth target of around 5.0% might be out of reach due to recent weak economic data. Among these measures, the central bank announced a reduction of the reserve requirement ratio by 0.5%, which is anticipated to inject 2 trillion Chinese Renminbi into the financial system.

Hard currency emerging markets bonds delivered strong returns over the reporting period, driven mostly by coupons and a generally favourable economic backdrop helped by a declining inflation profile. Local currency bonds also posted positive returns (in U.S. dollar terms), supported by overall emerging markets currency strength as the U.S. dollar weakened. From a credit standpoint, high yield issuers both on the sovereign and corporate side out-performed their investment grade counterparts over the reporting period.

As of the end of the reporting period, the Canadian yield curve is currently flat to slightly positive as a result of short-term rates having come down significantly during the last two quarters. Recent economic growth data has come below the BoC's forecast, while the unemployment rate has continued its upward slope, even in the absence of significant job losses. This puts the BoC in a position to continue cutting rates into the end of the calendar year, as inflation is forecasted to remain benign.

AGF Total Return Bond Class

(CLASS OF AGF ALL WORLD TAX ADVANTAGE GROUP LIMITED)

SEPTEMBER 30, 2024

The Underlying Fund has maintained a defensive credit position in anticipation of a challenging global economic environment going forward. Lower economic growth forecasts are expected to benefit sovereign bonds, in which the Underlying Fund has maintained a significant overweight. The portfolio manager believes there is currently a less compelling case to take on excessive credit risk as a favourable mid-single-digit yield can be achieved through a diversified mix of higher quality issuers, particularly on the government side. Lastly, the portfolio manager believes there are select opportunities in previously weak sovereigns that are now demonstrating a desire to reform fiscally and return to a more prudent monetary policy stance. Looking at the months ahead, any further progress on global inflation would likely provide momentum for bond markets; however, elevated fiscal concerns in many developed markets will likely act as an obstacle.

Related Party Transactions

AGFI is the manager ("Manager") of the Fund. Pursuant to the management agreement between the Fund and AGFI, AGFI is responsible for the day-to-day business of the Fund. AGFI also acts as the investment (portfolio) manager, managing the investment portfolio of the Fund. Under the management agreement, the Fund (except for Series I, Series O, Series Q and Series W Shares, if applicable) pays management fees, calculated based on the Net Asset Value of the respective series of the Fund. Management fees of approximately \$2,871,000 were incurred by the Fund during the period ended September 30, 2024.

Certain operating expenses relating to registrar and transfer agency services are paid directly by AGFI and in exchange, a fixed rate administration fee is payable by the Mutual Fund Series, Series F, Series FV, Series I, Series T and Series V Shares, as applicable, of the Fund. The administration fee is calculated based on the Net Asset Value of the respective series of the Fund at a fixed annual rate, as disclosed in the current prospectus. Administration fees of approximately \$162,000 were incurred by the Fund during the period ended September 30, 2024.

AGFI is an indirect wholly-owned subsidiary of AGF Management Limited.

Caution Regarding Forward-looking Statements

This report may contain forward-looking statements about the Fund, including its strategy, expected performance and condition. Forward looking statements include statements that are predictive in nature, that depend upon or refer to future events or conditions, or that include words such as "expects", "anticipates", "intends", "plans", "believes", "estimates" or negative versions thereof and similar expressions.

In addition, any statement that may be made concerning future performance, strategies or prospects, and possible future Fund action, is also a forward-looking statement.

Forward-looking statements are based on current expectations and projections about future events and are inherently subject to, among other things, risks, uncertainties and assumptions about the Fund and economic factors.

The forward-looking statements are by their nature based on numerous assumptions, which include, amongst other things, that (i) the Fund can attract and maintain investors and has sufficient capital under management to effect its investment strategies, (ii) the investment strategies will produce the results intended by the portfolio manager, and (iii) the markets will react and perform in a manner consistent with the investment strategies. Although the forward-looking statements contained herein are based upon what the portfolio manager believes to be reasonable assumptions, the portfolio manager cannot assure that actual results will be consistent with these forward-looking statements.

Forward-looking statements are not guarantees of future performance, and actual events and results could differ materially from those expressed or implied in any forward-looking statements made by the Fund. Any number of important factors could contribute to these digressions, including, but not limited to, general economic, political and market factors in North America and internationally, interest and foreign exchange rates, global equity and capital markets, business competition, taxation, changes in government regulations, unexpected judicial or regulatory proceedings, technological changes, cybersecurity, the possible effects of war or terrorist activities, outbreaks of disease or illness that affect local, national or international economies (such as COVID-19), natural disasters and disruptions to public infrastructure, such as transportation, communications, power or water supply or other catastrophic events.

It should be stressed that the above-mentioned list of factors is not exhaustive. You are encouraged to consider these and other factors carefully before making any investment decisions and you are urged to avoid placing undue reliance on forward-looking statements. Further, you should be aware of the fact that the Fund has no specific intention of updating any forward-looking statements whether as a result of new information, future events or otherwise, prior to the release of the next Management Report of Fund Performance.

Financial Highlights

The following tables show selected key financial information about the Fund and are intended to help you understand the Fund's financial performance for the past five years as applicable.

Net Asset Value per share	12.20	10.99	10.78	11.82	11.54

Explanatory Notes

(1) a) This information is derived from the Fund's audited annual financial statements. Under International Financial Reporting Standards ("IFRS"), investments that are traded in an active market are generally valued at closing price, which is determined to be within the bid-ask spread and most representative of fair value. As a result, there is no difference between the net assets per share presented in the financial statements ("Net Assets") and the net asset value per share calculated for fund pricing purposes ("Net Asset Value").

b) The following series of the Fund commenced operations on the following dates, which represents the date upon which securities of a series were first made available for purchase by investors.

Mutual Fund Shares	April 2016
Series F Shares	April 2016
Series FV Shares	November 2018
Series Q Shares	April 2016
Series V Shares	November 2018
Series W Shares	October 2016

(2) Net Assets, dividends and distributions are based on the actual number of shares outstanding at the relevant time. The increase/decrease from operations is based on the weighted average number of shares outstanding over the financial period.

(3) Dividends and distributions were paid in cash/reinvested in additional shares of the Fund, or both.

Series FV and Series V Shares of the Fund may make monthly distributions of capital so long as there is sufficient capital attributable to the series. The capital per share of the Series FV and Series V Shares as applicable, is as follows:

As at	Sept 30, 2024 (\$)	Sept 30, 2023 (\$)	Sept 30, 2022 (\$)	Sept 30, 2021 (\$)	Sept 30, 2020 (\$)
Series FV Shares	8.43	8.85	9.42	9.95	10.16
Series V Shares	8.20	8.75	9.21	9.72	10.05

(4) This is not a reconciliation of the beginning and ending Net Assets per share.

(5) The management expense ratio ("MER") of a particular series is calculated in accordance with National Instrument 81-106, based on all the expenses of the Fund (including Harmonized Sales Tax, Goods and Services Tax and interest, but excluding income tax, foreign withholding taxes, commissions and other portfolio transaction costs) attributable to that series, expressed as an annualized percentage of average daily Net Asset Value of that series during the period. For new series launched during the period, the MER is annualized from the date of the first external purchase.

(1), (2), (3), (4), (5), (6), (7) and (8) see Explanatory Notes

AGF Total Return Bond Class

(CLASS OF AGF ALL WORLD TAX ADVANTAGE GROUP LIMITED)

SEPTEMBER 30, 2024

As a result of the Fund's investment in the Underlying Fund, the MER is calculated based on the expenses of the Fund allocated to that series, including expenses indirectly incurred by the Fund attributable to its investment in the Underlying Fund, divided by the average daily Net Asset Value of that series of the Fund during the period.

The Fund does not pay duplicate management fees on the portion of the assets that it invests in the Underlying Fund. Accordingly, AGFI will waive the management fees payable or paid by the Underlying Fund in order to avoid such duplication.

- (6) AGFI waived certain fees or absorbed certain expenses otherwise payable by the Fund. The amount of expenses waived or absorbed is determined annually on a series by series basis at the discretion of AGFI and AGFI can terminate the waiver or absorption at any time.
- (7) The trading expense ratio ("TER") represents total commissions and other portfolio transaction costs expressed as an annualized percentage of average daily Net Asset Value during the period.

As a result of the Fund's investment in the Underlying Fund, the TER is calculated based on commissions and other portfolio transaction costs of the Fund, including such costs that are indirectly incurred by the Fund attributable to its investment in the Underlying Fund, divided by the average daily Net Asset Value of the Fund during the period.

- (8) The Fund's portfolio turnover rate ("PTR") indicates how actively the Fund's portfolio advisor manages its portfolio investments. A PTR of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher a fund's PTR in a year, the greater the trading costs payable by the fund in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of a fund.

PTR is calculated based on the lesser of the cumulative cost of purchases or cumulative proceeds of sales divided by the average market value of the portfolio, excluding short-term investments.

Management Fees

The Fund is managed by AGFI. As a result of providing investment and management services, AGFI receives a monthly management fee, based on the Net Asset Value of the respective series, calculated daily and payable monthly. Management fees in respect of Series I, Series O, Series Q and Series W Shares, if applicable, are arranged directly between the Manager and investors and are not expenses of the Fund. AGFI uses these management fees to pay for sales and trailing commissions to registered dealers on the distribution of the Fund's shares, investment advice, as well

as for general administrative expenses such as overhead, salaries, rent, legal and accounting fees relating to AGFI's role as manager.

	Annual rates	As a percentage of management fees	
		Dealer compensation	General administration and investment advice
Mutual Fund Shares	1.45%	29.53%	70.47%
Series F Shares	0.70%	-	100.00%
Series FV Shares	0.70%	-	100.00%
Series V Shares	1.45%	24.98%	75.02%

Past Performance*

The performance information shown assumes that all distributions made by the Fund in the periods shown were reinvested in additional securities of the Fund. Note that the performance information does not take into account sales, redemption, distribution or other optional charges that would have reduced returns or performance. How the Fund has performed in the past does not necessarily indicate how it will perform in the future.

It is AGFI's policy to report rates of return for series in existence greater than one year. The performance start date for each series represents the date of the first purchase of such series, excluding seed money.

All rates of return are calculated based on the Net Asset Value.

Year-By-Year Returns

The following bar charts show the Fund's annual performance for each of the past 10 years to September 30, 2024 as applicable, and illustrate how the Fund's performance has changed from year to year. The charts show, in percentage terms, how much an investment made on the first day of each financial period would have grown or decreased by the last day of each financial period.

Mutual Fund Shares

Performance for 2016 represents returns for the period from April 28, 2016 to September 30, 2016.

* The indicated rates of return shown here are the historical annual compounded total returns including changes in security value and reinvestment of all distributions and do not take into account sales, redemption, distribution or other optional charges by any securityholder that would have reduced returns or performance. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.
