

Interim Management Report of Fund Performance

AGF Fixed Income Plus Class

March 31, 2024

Management Discussion of Fund Performance

This management discussion of fund performance represents the portfolio management team's view of the significant factors and developments affecting the fund's performance and outlook.

Results of Operations

For the six months ended March 31, 2024, the Mutual Fund Shares of AGF Fixed Income Plus Class (the "Fund") returned 7.2% (net of expenses) while the Bloomberg Canada Aggregate Index returned 6.9%. The performance of the other series of the Fund is substantially similar to that of the Mutual Fund Shares, save for differences in expense structure. Refer to "Past Performance" section for performance information of such series.

The Fund holds Series I Units of AGF Fixed Income Plus Fund (the "Underlying Fund"), a fund managed by AGF Investments Inc. ("AGFI"). The discussion below references performance figures for Mutual Fund Units of the Underlying Fund. The performance of Series I Units is substantially similar to that of Mutual Fund Units, save for differences in expense structure.

The Fund out-performed the Bloomberg Canada Aggregate Index due to the Underlying Fund's allocation and superior security selection. Although tactical adjustments to the Underlying Fund's duration have been positive over the second half of the reporting period, curve positioning over the entire period was negative. Duration is a measure of the sensitivity of the portfolio to changes in interest rates.

Duration assets rallied into the end of 2023 on dovish U.S. Federal Reserve (the "Fed") comments and better odds of a soft landing in 2024. Towards the end of 2023, the Underlying Fund lowered its duration to below neutral relative to the benchmark, as the market's expectations for rate cuts seemed overly optimistic. In January 2024, the market began to price out the six to seven rate cuts that were assumed in December as the Fed indicated that more data was required to increase their confidence that monetary policy has had its intended effects, and inflation remained above its 2.0% target.

The Underlying Fund's underweight exposure to short-term Canadian treasuries detracted from performance as the inverted yield curve limited the benefit of holding longer maturity treasuries, to which the Underlying Fund had a higher exposure.

The Underlying Fund's largest positive contribution came from an overweight allocation to corporate bonds, as economic resilience over the reporting period acted as a tailwind for corporate credit and other higher beta assets. Beta measures the relative volatility of the value of a security compared with that of a market index. The Underlying Fund

focuses on corporate bonds with attractive valuations (i.e. wide credit spreads versus underlying government bonds) and solid financials. The Underlying Fund's largest detractor from performance came from the substantial underweight exposure to Canadian provincial bonds. While the large underweight exposure to federal government bonds also detracted marginally, as sovereign debt rallied towards the end of 2023, the Underlying Fund benefited from allocation and security selection in the category. The Underlying Fund's exposure to gilts was further increased in January 2024 as economic prospects weakened in the UK, making yields attractive. Additionally, the UK yield curve is less inverted compared to Canada, making a more compelling case for owning gilts.

The Underlying Fund was able to generate additional alpha through its out-of-benchmark component made up of high yield and convertible bonds, which benefited from the strong economic data and are less sensitive to moves in interest rates. Alpha is the excess return of the portfolio over the benchmark. The portfolio manager's tactical adjustment to the Underlying Fund's duration during the reporting period also supported relative performance.

The Underlying Fund entered into foreign exchange forward contracts during the period under review. As of March 31, 2024, the Underlying Fund was long Canadian dollar and short Pound Sterling and U.S. dollar in order to hedge its currency exposure.

The Fund had net subscriptions of approximately \$90 million for the current period, as compared to net subscriptions of approximately \$12 million in the prior period. The portfolio manager does not believe that subscription activity had a meaningful impact on the Fund's performance or the ability to implement its investment strategy.

The Mutual Fund Series and Series Q Shares of the Fund are closed to new investors as of July 5, 2023. These series remain available to existing investors, including those with systematic investment plans.

Total expenses before foreign withholding taxes, commissions and other portfolio transaction costs vary period over period mainly as a result of changes in average Net Asset Values (see Explanatory Note (1) a)) and investor activity, such as number of investor accounts and transactions. The increase in management fees accounted for most of the increase in expenses during the period when compared to the previous period due to an increase in average Net Asset Values. Shareholder servicing and administrative fees also increased during the period as a result of the increased average Net Asset Values. The decrease in interest expense was due to a decrease in overdraft positions throughout the period. The decrease in registration fees was due to variances between the accrued

This interim management report of fund performance contains financial highlights, but does not contain either the interim or annual financial statements of the investment fund. You can get a copy of the interim or annual financial statements at your request, and at no cost, by calling 1 800 268-8583, by writing to us at AGF Investments Inc., CIBC SQUARE, Tower One, 81 Bay Street, Suite 4000, Toronto, Ontario, Canada M5J 0G1 attention: Client Services, or by visiting our website at www.agf.com or SEDAR+ at www.sedarplus.ca.

amounts versus the actual expenses incurred in the previous period. All other expenses remained fairly consistent throughout the periods.

Recent Developments

During the reporting period, the global economy once again exhibited its resilience as capital markets yielded positive returns. These results were influenced by variable economic indicators, geopolitical tensions and the monetary policies enacted by central banks. Inflation rates broadly moderated year-over-year in both the developed and emerging markets, although recent months have raised the prospect of inflation becoming sticky around its current level. This prompted central banks in the developed markets to delay proposed rate cuts until later in 2024 as they gather more data to support the decision. The Bank of Canada ("BoC") maintained a 5.0% interest rate for the fifth consecutive meeting in March 2024 and remains committed to continuing its quantitative tightening policy until it sees a sustained decline in core inflation. Consumer price inflation in Canada fell to 2.8% in February 2024, slightly lower than the previous month's 2.9% and the lowest level since June 2023.

In the last calendar quarter of 2023, the U.S. economy experienced a quarter-on-quarter growth of 3.4%, slightly higher than 3.2% in the second estimate, driven by consumer spending and non-residential business investments. Consumer spending was revised higher, particularly in the services sector, while non-residential investment saw an increase in intellectual property products and equipment investments. The economy is estimated to grow by 2.3% in the first calendar quarter of 2024, continuing the trend of strong data coming out of the U.S.

U.S. consumer price inflation in February 2024 saw an unexpected rise to 3.2%, exceeding the market estimate of 3.1%. This increase can be attributed to energy costs, which impacted the headline inflation number as tensions in the Middle East and Ukraine have continued to flare up, pushing energy prices higher. Conversely, the prices for food and shelter experienced a slower growth rate. In terms of core inflation, it eased slightly to 3.8% in February from 3.9% in January, aligning closely with the forecasted 3.7%. In February, the month-on-month growth of personal consumption expenditures ("PCE") inflation was 0.3%, which was lower than the predicted 0.4%. The prices of services experienced a 0.3% rise, while goods saw a 0.5% increase. Core PCE inflation decreased to 0.3% in February from 0.5% in January, aligning with expectations.

The Fed maintained interest rates at 5.25%-5.50% for the fifth consecutive meeting in March 2024. Policymakers are targeting three potential rate cuts by the end of 2024, reflecting the projections made in December 2023. The unemployment rate increased to 3.9% in February 2024, reaching its highest point since January 2022 and surpassing market expectations of 3.7%, though it remains low by historical levels and has continued to support consumer spending. U.S. treasury yields decreased over the reporting period, experiencing a notable decline towards the end of 2023 as the market factored in the possibility of six to seven rate cuts in 2024. The first calendar quarter of 2024 has seen a relative steepening of the yield curve, with the 10-year yield

rising more than the 2-year yield, reflecting the strong economic conditions and increasing probability of a higher for longer environment.

The U.S. Dollar Index weakened over the reporting period, but has seen a notable rise since the beginning of calendar year 2024 indicating the growing likelihood of a soft landing without the need for excessive monetary policy support.

The European Central Bank ("ECB") also decided to keep interest rates at historically high levels for the fourth consecutive meeting in March 2024, as policymakers weighed worries about a potential recession against high underlying inflationary pressures. The main refinancing operations rate stayed at 4.5%, while the deposit facility rate held steady at 4.0%. In February 2024, the Euro area witnessed a year-on-year consumer price inflation of 2.6%, marking the lowest rate in the past three months. However, this figure still surpasses the ECB's target of 2.0%. The decline in inflation primarily resulted from lower energy prices. Core inflation came down to 3.1%, marking its lowest level since March 2022. Economic performance in the European Union has been mixed, with Germany's economy officially entering a recession in March 2024, as weak manufacturing data continues to weigh on growth. Southern and eastern European states have seen moderate economic growth however, showcasing the geographical variation in economic activity.

China's economy saw a 1.0% quarter-on-quarter growth in last calendar quarter of 2023, which aligned with market expectations but displayed a slowdown compared to the 1.5% growth witnessed in the previous quarter. This marked the sixth consecutive period of quarterly expansion; however, the property sector's weakness persists and hampers the overall economic recovery. The key lending rates were left unchanged by the People's Bank of China during its March 2024 meeting. The one-year loan prime rate remained at 3.45%, while the five-year rate stayed at 3.95%, after a 0.25% cut in February. These historically low rates are part of the central bank's efforts to stimulate economic growth amid challenges from the property market and a nearly record low in consumer confidence.

Emerging markets bonds delivered positive returns over the reporting period mostly on the back of yields driven lower by falling inflation and slower growth. Local currency bonds under-performed hard currency bonds in U.S. dollar terms. Emerging markets U.S. dollar-denominated sovereign and corporate credit spreads tightened significantly over the reporting period.

Global investment grade and high yield bonds saw positive returns over the reporting period amid a declining inflation profile and stronger-than-anticipated growth in select markets. The U.S. 10-year treasury yield decreased from 4.69% to 4.20% over the reporting period, and the 2-year treasury yield slipped from 5.12% to 4.59%. Meanwhile, the Canada 10-year bond yield declined from 4.03% to 3.47% and the yield on the 2-year bond moved down from 4.88% to 4.17%. Credit spreads tightened significantly during the reporting period and most credit categories out-performed government bonds on higher yields versus their safer counterparts.

AGF Fixed Income Plus Class

(CLASS OF AGF ALL WORLD TAX ADVANTAGE GROUP LIMITED)

MARCH 31, 2024

The portfolio manager believes global growth through 2024 should continue to be negatively affected by the lagged effects of monetary tightening. The possibility of the Fed maintaining its current stance on rate cuts could have a positive impact on various markets, especially in countries where central banks implemented tightening measures early on.

The Canadian economy's lack of substantial growth for much of 2023, and recent progress made on inflation, could place the BoC in a more favourable position to gradually lower policy rates in 2024. Furthermore, many higher-cost mortgage renewals will become due in the coming year, straining an already burdened consumer. The Canadian yield curve remains inverted however, offering a weaker risk-return profile for adding duration versus other developed nations with expectations of rate cuts later in the year. Volatility may persist due to fluctuations in the growth-versus-inflation narrative, as it will likely be driven by energy and commodity prices in the months ahead.

Following the gyrations in the bond market, the Underlying Fund was positioned slightly below neutral duration as of March 31, 2024. In addition, the drop in inflation break-evens has made inflation-linked bonds more attractive and the Underlying Fund has maintained a small position in this asset class. The portfolio manager remains selective from a credit perspective, emphasizing quality corporate bonds whose business models appear highly capable of supporting debt payments. Furthermore, the portfolio manager continues to focus on overall yield as overall corporate yields remain elevated relative to norms in the last two decades. In the current environment, the portfolio manager is confident that the current positioning of the Underlying Fund is capable of delivering an attractive and competitive yield.

Related Party Transactions

AGFI is the manager ("Manager") of the Fund. Pursuant to the management agreement between the Fund and AGFI, AGFI is responsible for the day-to-day business of the Fund. AGFI also acts as the investment (portfolio) manager, managing the investment portfolio of the Fund. Under the management agreement, the Fund (except for Series I, Series O, Series Q and Series W Shares, if applicable) pays management fees, calculated based on the Net Asset Value of the respective series of the Fund. Management fees of approximately \$776,000 were incurred by the Fund during the six months ended March 31, 2024.

Certain operating expenses relating to registrar and transfer agency services are paid directly by AGFI and in exchange, a fixed rate administration fee is payable by the Mutual Fund Series, Series F, Series FV, Series I, Series T and Series V Shares, as applicable, of the Fund. The administration fee is calculated based on the Net Asset Value of the respective series of the Fund at a fixed annual rate, as disclosed in the current prospectus. Administration fees of approximately \$49,000 were incurred by the Fund during the six months ended March 31, 2024.

AGFI is an indirect wholly-owned subsidiary of AGF Management Limited.

Caution Regarding Forward-looking Statements

This report may contain forward-looking statements about the Fund, including its strategy, expected performance and condition. Forward looking statements include statements that are predictive in nature, that depend upon or refer to future events or conditions, or that include words such as "expects", "anticipates", "intends", "plans", "believes", "estimates" or negative versions thereof and similar expressions.

In addition, any statement that may be made concerning future performance, strategies or prospects, and possible future Fund action, is also a forward-looking statement. Forward-looking statements are based on current expectations and projections about future events and are inherently subject to, among other things, risks, uncertainties and assumptions about the Fund and economic factors.

The forward-looking statements are by their nature based on numerous assumptions, which include, amongst other things, that (i) the Fund can attract and maintain investors and has sufficient capital under management to effect its investment strategies, (ii) the investment strategies will produce the results intended by the portfolio manager, and (iii) the markets will react and perform in a manner consistent with the investment strategies. Although the forward-looking statements contained herein are based upon what the portfolio manager believes to be reasonable assumptions, the portfolio manager cannot assure that actual results will be consistent with these forward-looking statements.

Forward-looking statements are not guarantees of future performance, and actual events and results could differ materially from those expressed or implied in any forward-looking statements made by the Fund. Any number of important factors could contribute to these digressions, including, but not limited to, general economic, political and market factors in North America and internationally, interest and foreign exchange rates, global equity and capital markets, business competition, taxation, changes in government regulations, unexpected judicial or regulatory proceedings, technological changes, cybersecurity, the possible effects of war or terrorist activities, outbreaks of disease or illness that affect local, national or international economies (such as COVID-19), natural disasters and disruptions to public infrastructure, such as transportation, communications, power or water supply or other catastrophic events.

It should be stressed that the above-mentioned list of factors is not exhaustive. You are encouraged to consider these and other factors carefully before making any investment decisions and you are urged to avoid placing undue reliance on forward-looking statements. Further, you should be aware of the fact that the Fund has no specific intention of updating any forward-looking statements whether as a result of new information, future events or otherwise, prior to the release of the next Management Report of Fund Performance.

Explanatory Notes

- (1) a) This information is derived from the Fund's audited annual financial statements and unaudited interim financial statements. Under International Financial Reporting Standards ("IFRS"), investments that are traded in an active market are generally valued at closing price, which is determined to be within the bid-ask spread and most representative of fair value. As a result, there is no difference between the net assets per share presented in the financial statements ("Net Assets") and the net asset value per share calculated for fund pricing purposes ("Net Asset Value").
- b) The following series of the Fund commenced operations on the following dates, which represents the date upon which securities of a series were first made available for purchase by investors.

Mutual Fund Shares	April 2016
Series F Shares	April 2016
Series I Shares	April 2018
Series Q Shares	April 2016
Series W Shares	April 2016

- (2) Net Assets, dividends and distributions are based on the actual number of shares outstanding at the relevant time. The increase/decrease from operations is based on the weighted average number of shares outstanding over the financial period.
- (3) Dividends and distributions were paid in cash/reinvested in additional shares of the Fund, or both.
- (4) This is not a reconciliation of the beginning and ending Net Assets per share.
- (5) The management expense ratio ("MER") of a particular series is calculated in accordance with National Instrument 81-106, based on all the expenses of the Fund (including Harmonized Sales Tax, Goods and Services Tax and interest, but excluding income tax, foreign withholding taxes, commissions and other portfolio transaction costs) attributable to that series, expressed as an annualized percentage of average daily Net Asset Value of that series during the period. For new series launched during the period, the MER is annualized from the date of the first external purchase.

As a result of the Fund's investment in the Underlying Fund, the MER is calculated based on the expenses of the Fund allocated to that series, including expenses indirectly incurred by the Fund attributable to its investment in the Underlying Fund, divided by the average daily Net Asset Value of that series of the Fund during the period.

The Fund does not pay duplicate management fees on the portion of the assets that it invests in the Underlying Fund. Accordingly, AGFI will waive the management fees payable or paid by the Underlying Fund in order to avoid such duplication.

- (6) AGFI waived certain fees or absorbed certain expenses otherwise payable by the Fund. The amount of expenses waived or absorbed is determined annually on a series by series basis at the discretion of AGFI and AGFI can terminate the waiver or absorption at any time.
- (7) The trading expense ratio ("TER") represents total commissions and other portfolio transaction costs expressed as an annualized percentage of average daily Net Asset Value during the period.
- As a result of the Fund's investment in the Underlying Fund, the TER is calculated based on commissions and other portfolio transaction costs of the Fund, including such costs that are indirectly incurred by the Fund attributable to its investment in the Underlying Fund, divided by the average daily Net Asset Value of the Fund during the period.
- (8) The Fund's portfolio turnover rate ("PTR") indicates how actively the Fund's portfolio advisor manages its portfolio investments. A PTR of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher a fund's PTR in a year, the greater the trading costs payable by the fund in the year,

MARCH 31, 2024

and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of a fund.

PTR is calculated based on the lesser of the cumulative cost of purchases or cumulative proceeds of sales divided by the average market value of the portfolio, excluding short-term investments.

Management Fees

The Fund is managed by AGFI. As a result of providing investment and management services, AGFI receives a monthly management fee, based on the Net Asset Value of the respective series, calculated daily and payable monthly. Management fees in respect of Series I, Series O, Series Q and Series W Shares, if applicable, are arranged directly between the Manager and investors and are not expenses of the Fund. AGFI uses these management fees to pay for sales and trailing commissions to registered dealers on the distribution of the Fund's shares, investment advice, as well as for general administrative expenses such as overhead, salaries, rent, legal and accounting fees relating to AGFI's role as manager.

	As a percentage of management fees		
	Annual rates	Dealer compensation	General administration and investment advice
Mutual Fund Shares	1.20%	35.33%	64.67%
Series F Shares	0.70%	-	100.00%

Past Performance*

The performance information shown assumes that all distributions made by the Fund in the periods shown were reinvested in additional securities of the Fund. Note that the performance information does not take into account sales, redemption, distribution or other optional charges that would have reduced returns or performance. How the Fund has performed in the past does not necessarily indicate how it will perform in the future.

It is AGFI's policy to report rates of return for series in existence greater than one year. The performance start date for each series represents the date of the first purchase of such series, excluding seed money.

All rates of return are calculated based on the Net Asset Value.

Year-By-Year Returns

The following bar charts show the Fund's annual performance for each of the past 10 years to September 30, 2023 (interim performance for the six months ended March 31, 2024) as applicable, and illustrate how the Fund's performance has changed from year to year. The charts show, in percentage terms, how much an investment made on the first day of each financial period would have grown or decreased by the last day of each financial period.

Mutual Fund Shares

Performance for 2016 represents returns for the period from May 25, 2016 to September 30, 2016.

Series F Shares

Performance for 2016 represents returns for the period from September 2, 2016 to September 30, 2016.

Series I Shares

Performance for 2018 represents returns for the period from June 1, 2018 to September 30, 2018.

Series Q Shares

Performance for 2016 represents returns for the period from April 28, 2016 to September 30, 2016.

* The indicated rates of return shown here are the historical returns including changes in security value and reinvestment of all distributions and do not take into account sales, redemption, distribution or other optional charges by any securityholder that would have reduced returns or performance. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.
